### PRODUCT DESCRIPTION:

Octotint 435 is a water-based dispersion of highly refined pigments of extremely fine particle size and purity. It can be used with good compatibility in aqueous formulations where its characteristic color would be desired.

The color characteristics of Octotint 435 are pleasing and useful both in masstone and tint. The pigment sources display high tinting strength and hiding power. Because the Octotint435 is water-based, dispersibility into a latex system is greatly enhanced while demonstrating excellent handling properties.

### STORAGE AND HANDLING:

Containers should be kept tightly closed; avoid direct sources of heat or sunlight when possible. Once a drum has been opened, it is important not to introduce bacteria into the drum. Make sure the part drum is used quickly and that all stock is rotated on a first-in, first-out basis. Protect from freezing. Store at 40 – 90 deg F. Contents should be stirred using mechanical agitation prior to use. Shelf life expected one year from date of manufacture provided the material is stored at proper temperatures and containers remain tightly closed.
