

Paracure SSF-30

Gelling Agent

Tiarco RST

Rheology & Surfactant Technologies
Technical Data

Paracure SSF-30 is very finely ground sodium silicofluoride in water solution, used as a heat/pH activated gelling agent in latex foam curing systems. This product is non-staining and non-discoloring.

Use: stir well before and during use as product quickly settles. Store with cover attached. Use promptly, product slowly hydrolyses with time and may lose potency.

Paracure SSF-30 is manufactured at our Dalton, GA facility using Tiarco RST Quality Assurance process, with continual improvement as its goal.

SPECIFICATIONS

Appearance:	Gray powder in liquid
Activity:	30.0 +/- 1.0%
pH:	4.5 +/- 0.5

Paracure SSF-30 is available in pail, drum, and tote quantities.
